Bhopal, India | +91-6260223528 | devenverma145@gmail.com | LinkedIn | GitHub |

PROFESSIONAL SUMMARY

Final-year Integrated M-Tech student in Computer Science (AI & ML) at VIT Bhopal with a CGPA of 8.11, seeking full-time roles in Software Development, Machine Learning, or Data Science. Proven experience building real-world AI/ML solutions and responsive web applications, with hands-on internship and project expertise in deep learning, computer vision, and full-stack development.

Education

Integrated M.Tech – Computer Science (AI & ML)
VIT Bhopal University

OCT 2022 - JUL 2027
CGPA: 8.11/10

Technical Skills

Languages: Python, Java, HTML/CSS, JavaScript
Frameworks: Bootstrap, WordPress, WooCommerce
Libraries: pandas, NumPy, OpenCV, TensorFlow, Scikit-learn
Developer Tools: Git, GitHub, VS Code, PyCharm
Core Fundamentals: OOP, Data Structures & Algorithms

Experience

Website Development Intern | AK Infosoft Pvt. Ltd.

Oct 2025 – Dec 2025

- Built and maintained 5+ responsive web interfaces using HTML, CSS, JavaScript, Bootstrap, and jQuery, improving cross-device compatibility.
- Customized and managed client websites using WordPress and WooCommerce, enhancing functionality and reducing content update time by ~40%.
- Wrote clean, optimized, and well-documented code following industry best practices, contributing to 3 feature releases.
- Performed debugging and troubleshooting, resolving 20+ reported issues and improving overall website reliability and performance.
- Participated in team meetings and code reviews, collaborating on feature design and problem-solving across 2 agile sprints.

Projects

Panoptic Image Segmentation for Lung Disease | Python, Deep Learning, Computer Vision, Medical Imaging

- Designed a panoptic segmentation framework to detect and segment lung disease regions from medical images with pixel-level accuracy.
- Implemented semantic and instance segmentation models achieving ~92% segmentation accuracy on benchmark lung CT datasets.
- Applied advanced image preprocessing and data augmentation techniques, improving model generalization by ~15% on unseen data.
- Evaluated models using IoU, Dice coefficient, and F1-score metrics to ensure reliable clinical-grade segmentation results.

Face Recognition-Based Attendance System | Python, OpenCV, Machine Learning, Computer Vision

- Developed a real-time face recognition attendance system using OpenCV and ML, achieving 95%+ recognition accuracy across 50+ individuals.
- Implemented feature extraction and image preprocessing pipeline, reducing false positives by ~20% under varying lighting conditions.
- Integrated attendance logging module, eliminating 100% manual entry and reducing processing time to under 2 seconds per individual.
- Evaluated system on multiple datasets, ensuring robustness and consistent accuracy across diverse environments and scales.

Achievements / Certifications

- Cloud Computing(NPTEL)** - Cloud architecture, virtualization, and service models
- Applied Machine Learning in Python** - University of Michigan (Coursera)
